

Office and Industrial Ergonomics

Assessments

Individual office workstation evaluations are completed using an effective ergonomics assessment model and a structured interview process to gather information.

Office Ergonomics Onsite Evaluations

Individual office workstation evaluations are completed using an effective ergonomics assessment model and a structured interview process to gather information.

- Individuals are provided basic ergonomics education and educational materials at the time of the evaluation
- Measurements are taken
- We generate a report with all findings and recommendations
- An objective risk factor assessment is completed
- A discomfort survey is administered
- Follow ups are completed when requested

Virtual Ergonomics Evaluations

Evaluations are typically completed onsite but we are also capable of completing them virtually. Our Virtual Evaluations save you money on travel time, out-of-pocket costs and time.

- We email the employee instructions
- We set a time to do the assessment by telephone
- The employee takes photos and measurements and emails these to the consultant
- The employee is contacted by telephone for the assessment
- We generate the same type of report as we do for the site assessments
- Follow ups are completed when requested

Office Ergonomics Mini Assessments

Mini assessments take ~20-30 minutes each. They are conducted at the person's work area. If you do not need a formal report, this is a good option to save time and money. It is recommended employees take the one hour ergonomics training course prior to the mini assessments.

Benefits of Office Ergonomics Mini Assessments:

- You save money, as 2-3 can be done in an hour
- There is less disruption in the workplace
- You can get workable solutions quicker for your staff
- It takes less time, so there is less impact on productivity

Industrial Evaluations

Evaluations for industrial, manufacturing and other non-office type jobs are designed to determine the frequency, duration and intensity of jobs/tasks that may contribute to, or create, ergonomics risk factors.

Solutions Northwest applies the full weight of our experience and expert knowledge, using published and commonly used tools and, where applicable, state standards and guidelines, to minimize existing ergonomics risk factors.

Solutions Northwest will lead your organization through a structured process to identify practical and realistic interventions to solve problems and eliminate ergonomics risks factors through engineering, administrative and/or work practice controls.

Solutions Northwest has experience providing industrial evaluations for:

- Libraries
- Fishing and Transportation Vessels
- Transportation Vehicles
- Educational Facilities
- Municipalities
- Nursing Homes
- Retail
- Hotels
- School Districts
- Restaurants
- Semi-Conductor Industries
- Manufacturers
- Hospitals/Clinics
- Logging Operations

Specializing in Stay-At-Work Systems

Let us help you create a safer work environment, improved work efficiency, increased productivity, and greater job satisfaction.
